LIMITED LEAD REPORT WHEATLEY ELEMENTARY SCHOOL #337 1299 NEAL STREET, NE WASHINGTON, DC PREPARED BY HORNE ENGINEERING SERVICES, INC.

WO #FM-200219506

TRACKING #2053

February 18, 2003

EXECUTIVE SUMMARY

Horne Engineering Services, Inc. was requested to perform a limited lead survey at Wheatley ES. The request stated "Throughout. Assess and abate asbestos and lead paint throughout the school."

SURVEY

Horne Engineering performed a lead-in-paint survey of affected testing combinations in the areas addressed by the work order. The lead survey was performed using a NITON XL-309 XRF Lead Paint Analyzer, which allows an immediate determination of the lead content of a painted surface. The survey was performed in accordance with applicable District of Columbia Department of Health, U.S. Department of Housing and Urban Development, and U.S. Environmental Protection Agency regulations. Results are presented in a table attached to this report.

RESULTS

During the survey of Wheatley ES, Horne Engineering tested the following surfaces for lead-based paint: Plaster, cinderblock and drywall walls; wood and metal window system components on interior and exterior of the building; metal and wood doors and door system components on the interior and exterior of the building; metal stair components; and miscellaneous wood and metal trim components throughout school building.

Testing was performed according to Department of Housing and Urban Development (HUD) guidelines, which allows similarly painted surfaces to be grouped as a single testing combination. For this reason similarly painted surfaces were addressed as single testing combinations by testing representative numbers of the appropriate components.

The following surfaces were found to contain lead-based paint:

Building Section #1:

Stairways #1:

• Tan painted metal stair components (rail caps, risers, stringers, etc.), observed to be in fair condition.

Throughout Section #1:

- Tan painted metal door casings, observed to be in fair condition.
- Beige painted wood window casings (located on unpainted replacement windows), observed to be in fair condition.

Building Section #2:

Stairways #2:

• Tan painted wood window casings (located on unpainted replacement windows), observed to be in fair condition.

Throughout Section #2:

- Tan painted wood window casings (located on unpainted replacement windows), observed to be in fair condition.
- Beige painted wood window casings (located on unpainted replacement windows), observed to be in fair condition.
- Tan painted metal door casings, observed to be in fair condition.
- Tan painted wood wall trim, observed to be in fair condition.

Building Section #3:

Throughout Section #3:

• Tan painted metal door casings, observed to be in fair condition.

Building Section #4:

Stairways #4:

• Black painted metal stair components (risers, wall casings, etc.), observed to be in fair condition.

Throughout Section #4:

• Tan painted metal door casings, observed to be in fair condition.

Exterior of Building:

- White painted wood door casings, located throughout building exterior, observed to be in poor condition.
- Green painted wood door casings, located throughout building exterior, observed to be in poor condition.

- White painted wood window casing (located in one area only, not replaced), observed to be in poor condition.
- White painted metal window guards (located in two locations only), observed to be in poor condition.

See attached floor plans for locations of building sections, stairways and miscellaneous information on locations of LBP components

Wheatley ES

Section IV: Assessment Comments

All affected surfaces tested for LBP throughout school building. Some areas previously tested under tracking #2134 and 2135 on 11/22/02. Several components tested positive for LBP. See attached summary for specific locations containing LBP components.

Section V: Response Action Required

Paint Imp	act >1.0 mg/cm2	(as measured by X	RF). See a	attached summar	y and floor plans f	or

Date:	

Lead Level:

- 1 No LBP to be impacted
- 2 Paint Impact < 0.5% Pb by wt.
- 3 Paint Impact > 0.5% Pb by wt.

INTERPRETATION OF XRF RESULTS

XRF results are expressed in the attached table as either positive (POS) or negative (NEG). A third result may be given as an incomplete (INCOM), when a reading was not able to be completed due to surface irregularities or other factors. In the case of an INCOM, the surface is always sampled again by either re-sampling the same area or moving over a short distance to where a complete reading may be more easily obtained.

The results in the table are expressed as a number in mg/cm² (milligrams per square centimeter of surface sampled). Positive results, indicated by POS in the "Result" column and in bold faced type. The District of Columbia has determined that lead-based paint is paint containing greater than 1.0 mg/cm².

Other columns in the table include:

- "Site" (a number is assigned to each area affected by a work order
- "Floor" (a number indicating the floor level)
- "Side" (either A, B, C, or D assigned clockwise around a room with side A being the wall surface that faces a main road or other feature that can be easily recognized)
- "Room" (the room or area in which the sample is collected)
- "Source" (for example, wall, ceiling, etc.)
- "Substrate" (material source is composed of, such as plaster, wood, etc.)
- "Feature" or "Feat" (window casing, sash, door, etc.)
- "Condition" of paint surface (intact, poor, fair, etc.)
- "Color" (color of the surface)
- "Date and time" (in which the sample was collected)
- "Result" (POS, NEG or INCOM); and "Pbc+/- Prec" (actual numerical result of lead content of area sampled, expressed as a number with a +/- range within a 95% level of confidence).

In some cases, more readings will be displayed on the XRF Results sheets than are used for the assessment of one particular work order. In these cases, the applicable XRF Results for that particular work order will be designated using brackets "[]". The other readings that are not used will appear without brackets.
